other story about 9/11

VISITOR GUIDE FOR TRUTH SEEKERS

Three Towers, including little-known Building 7

This guide will provide you with additional information about the destruction of WTC 1, 2, and 7 that you may not find in the official 9/11 Memorial Museum.

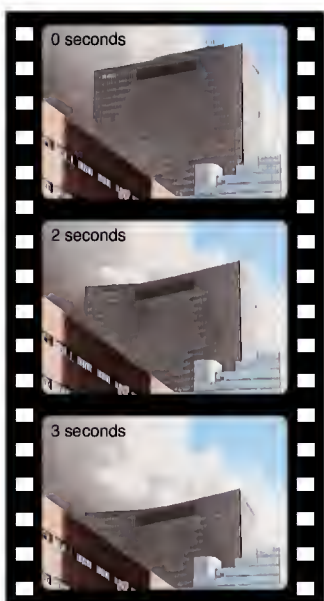

For further questions and inquiries, email
info@ae911truth.org

WTC Building 7

On the afternoon of September 11, 2001, a *third* skyscraper, 47-story tall World Trade Center Building 7, located 300 feet north of World Trade Center 1, collapsed at 5:20pm. *NOT* hit by a plane, it had sustained some damage and had a few small, scattered fires, but was completely destroyed by “normal office fires... fueled by office furnishings” according to the National Institute of Standards and Technology (NIST), the agency responsible for investigating its collapse.

WTC Building 7, built in 1986

47 stories destroyed in under 7 seconds

The destruction of Building 7 has all the characteristics of a controlled demolition with explosives:

- The building fell almost symmetrically straight down in less than 7 seconds – and at free-fall acceleration for the first 100 feet.
- The overall building mass fell uniformly through what was the path of *greatest* resistance.
- The kink in the roofline is characteristic of a demolition timing sequence where the walls are collapsing inward.

See the evidence at AE911Truth.org

All of the debris ended up in a compact pile centered within the building's footprint. Evidence of incendiaries was documented by FEMA in May, 2002.

WTC 7's debris pile reveals the complete shattering of the steel structure

WTC Twin Towers

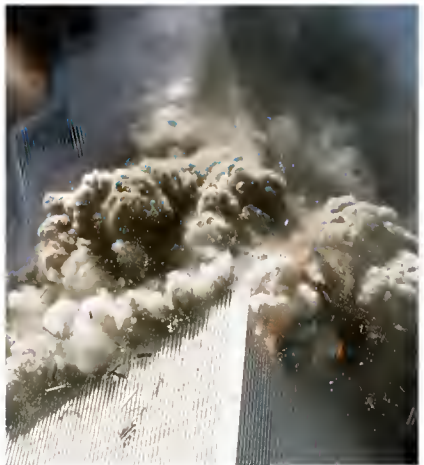

Explosive destruction of WTC 1

World Trade Center 1's structural framing was completely destroyed in about 10 seconds. Although called a "gravitational collapse", multi-ton sections of structural steel were hurled up to 600 feet sideways at 60 mph. Residue of incendiaries was documented by the USGS.

See the evidence at AE911Truth.org

World Trade Center 2 sustained minor damage from the aircraft and relatively cool fires that were almost burned out when explosions caused the top block to fall over. Yet, its destruction progressed symmetrically down at near free-fall acceleration straight through 70,000 tons of cold, hard steel as if it weren't there.

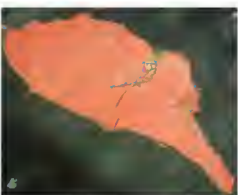

WTC 2 "collapsing"

Explosive Controlled Demolitions?

The Twin Tower collapses have all the characteristics of controlled demolitions using explosives, including a rapid onset of destruction and complete dismemberment of structural connections. All 3 buildings had to have their columns severed to fall the way they did, synchronistically timed floor by floor.

Explosives Discovered in WTC Dust

Unignited nano-thermite was discovered by scientists in all samples of the WTC dust

The discovery of pools of molten iron beneath the piles of all 3 skyscrapers reveals the use of incendiary cutter charges. Jet fuel does not burn hot enough to melt steel, but incendiaries, like thermite, which were discovered in the WTC dust, can cut through steel like a hot knife through butter.

Architects & Engineers for 9/11 Truth has compiled a vast amount of evidence proving that all 3 World Trade Center skyscrapers were deliberately destroyed with explosives on 9/11.

Visit us at AE911Truth.org and view the evidence for yourself. If you feel a new WTC 9/11 investigation is needed, please sign our petition and speak out.

Did you know a 3rd tower fell on 9/11?

Over 2,000 experts call for an independent investigation into the destruction of Building 7 and the Twin Towers.

The Evidence Might Surprise You

"On behalf of my son, Bobby, who we lost in the South Tower on 9/11, and all the family members, we thank the architects and engineers for their dedication in pursuing the truth about what really happened."

– Bob McIlvaine
